

## The Price Display – Case Design Changes – Back panel only part 2

5. The case doesn't fully close as the pins on the board do not have enough space.

Pic 1: Back of case with circuit board inside. Note bottom right in pic is open.

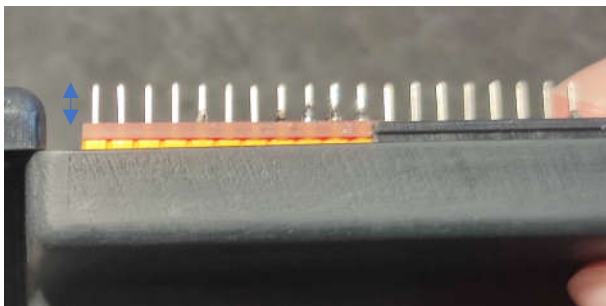

Pic 2A&B: I have lined up the two halves. See how the pins protrude past base of top case.

**Pic 3:** When USB Port lined up, the distance from the back case top to bottom of pins was 16.5mm

**Other dimensions:**

- Length of pin below red board: 4.2mm (see pic 4)
- Width from top of Chip to bottom of red board = 9.1mm (see pic 5)
